

## MAC Source Communications Announces New Partnership with Digitus Biometrics – 2009

**Release Date:** November 17, 2009

MAC Source Communications Inc., a voice and data systems integrator, and Digitus Biometrics Inc., a leading access control solutions provider, have announced an agreement to partner on highly-secure access control solutions. Applications for this technology include securing data center entry points, communications closets, or even outside building doors. As a complete solutions provider, MAC Source strives to provide our customers with a full suite of products and solutions that will enhance their communications systems.

MAC Source realizes that in today's world, security is a top priority for businesses. MAC Source selected Digitus Biometrics for their access control and security products because their biometric scanners were significantly more secure and cost effective than competitive systems and traditional access protocols. The networked system is IP based and thus units can be located anywhere in the world and managed centrally via secure IP connections. Current customers include military bases, government buildings, hospitals and other healthcare facilities, industrial facilities, and schools and universities. Their newest customer in Upstate New York is Syracuse University.

### About Digitus Biometrics

Digitus Biometrics, headquartered in Savannah, GA, offers a state of the art, IP based, high tech system that provides biometric authentication and access rights for individuals based on two primary inputs; something you know (PIN code) and something you are (your biometric fingerprint template) to any type of building or area in need of access control.

### About MAC Source Communications

MAC Source Communications Inc. is a complete solutions provider, headquartered in Syracuse, NY, with branch locations across NY State as well as Chicago, IL. Our core business is the design, implementation, and on-going support of converged communications products and services. Specializations include IP Telephony, Unified Messaging, Contact Center, Mobility applications, and other IP Network services.
