

MAC Source Receives “Northeast Rookie of the Year” Award at the Palo Alto Networks Partner Summit

Syracuse, NY, December 21, 2011 – MAC Source Communications, Inc., a provider of business collaboration solutions, announced today that it has been recognized as the “Northeast Rookie of the Year” by Palo Alto Networks.

MAC Source was honored for 2011 revenue achievements, commitment to relationship growth, and uncovering new business opportunities, all within the first year of the partnership. MAC Source’s award was presented during the recent Palo Alto Networks North American Partner Summit in New Orleans, Louisiana.

“MAC Source has proven that we are dedicated to offering the most innovative security technologies to our clients,” said Tim McDermott, President of MAC Source Communications. “Palo Alto Networks is a leading innovator of next-generation firewalls, and with the outstanding service and support we receive, this is a win-win for MAC Source, Palo Alto Networks and most importantly, our customers.”

MAC Source Communications offers a full spectrum of products and services to help customers secure their networks using Palo Alto Networks technology. From engineering and design, to product deployment, integration, training, support and version upgrade services; MAC Source is uniquely positioned to help organizations address their most critical security challenges.

MAC Source plans to grow its security practice in the coming years and is committed to building its relationship with Palo Alto Networks and other security vendors in the future.

About Palo Alto Networks

Palo Alto Networks™ is the network security company. Its next-generation firewalls enable unprecedented visibility and granular policy control of applications and content – by user, not just IP address – at up to 20Gbps with no performance degradation. Based on patent-pending App-ID™ technology, Palo Alto Networks firewalls accurately identify and control applications – regardless of port, protocol, evasive tactic or SSL encryption – and scan content to stop threats and prevent data leakage. Enterprises can for the first time embrace Web 2.0 and maintain complete visibility and control, while significantly reducing total cost of ownership through device consolidation. Most recently, Palo Alto Networks has enabled enterprises to extend this same network security to remote users with the release of GlobalProtect™ and to combat targeted malware with its WildFire™ service.
